NxtWave Growth Strategy: 500 Registrations

Workshop: "Build Your First AI Project in 60 Minutes"

Candidate: Siddu Siddartha Reddy
Timeline: 7 Days • **Budget:** ₹2,000

🎯 1. Target Audience: The Overwhelmed Engineer

Who: 3rd/4th Year B.Tech students (Tier 2/3 colleges in India; CSE/ECE/IT).

- **Placement Anxiety:** 85% of tech job descriptions now demand practical AI skills, but college syllabus only teaches outdated theory.
- **Tutorial Fatigue:** Students hoard 50+ bookmarked tutorials they never complete. A tight **60-minute live format** eliminates friction.
- **Frictionless Conversion:** Free of charge + certificate + verifiable GitHub project = zero risk to register.

💰 2. Acquisition Economics (Budget: ₹2,000)

Channel	Target Regs	Cost	Blended CAC
WhatsApp Viral Loops	**250 (50%)**	₹0	₹0 / reg
Campus Ambassadors (10)	**150 (30%)**	₹1,500	₹10 / reg
Targeted IG/LinkedIn Boost	**100 (20%)**	₹500	₹5 / reg
Total Campaign	**500 Regs**	**₹2,000**	**₹4.00 CAC**

🚀 3. Multi-Tiered Acquisition Funnel

🟢 Channel 1: WhatsApp Virality

Target: 250 Registrations (50%)

- Post-registration creates immediate unique referral link.
- **Incentive:** Refer 3 batchmates & unlock exclusive *"AI Placement Interview Toolkit"*.
- Infiltrates official placement & hostel WhatsApp groups via batchmates.

🎓 Channel 2: Campus Ambassadors

Target: 150 Registrations (30%)

- Recruit 10 college coding club leads & placement reps.
- ₹150 data allowance + milestone certification.
- Each drives 15-20 registrations through official batch announcements and lab circles.

📱 Channel 3: Targeted Social

Target: 100 Registrations (20%)

- ₹500 micro-budget behind 1 viral POV reel: *"Your interviewer asks: What AI have you actually built?"*
- LinkedIn carousels targeting tech placement groups.
- High urgency CTA linking straight to registration.

📅 4. 7-Day Sprint Execution Matrix

Day	Strategic Action & Focus	Urgency / Messaging Hook	Daily & Cum. Target
Day 1-2	Launch interactive landing page. Onboard 10 ambassadors. Seed initial batch.	"First 100 seats open — Zero prerequisites"	+130 regs (130 / 500)
Day 3-4	Viral referral waves trigger. LinkedIn carousel. Boost top Instagram Reel.	"Over 50% seats claimed in 48 hours"	+130 regs (260 / 500)
Day 5-6	Ambassador leaderboard push. Social proof notifications & WhatsApp share blast.	"Only 80 spots remaining for Saturday"	+160 regs (420 / 500)
Day 7	Final scarcity countdown. Automated WhatsApp show-up calendar ping.	"Closing tonight — Final batch call"	**+80 regs (500 / 500)**

Execution Asset, Growth Tests & AI Learnings

Live Asset: https://siddureddyy.github.io/Growth/

GitHub: github.com/SidduReddyy/Growth
Format: High-Conversion Web Asset

💻 5. Working Asset Architecture (Landing Page + Viral Engine)

Rather than a static webpage, I built a **full-funnel growth asset** with built-in virality and urgency triggers:

- **Urgency Mechanics:** Live countdown timer + dynamic ticking seat counter ("87 spots left").
- **Social Proof Toasts:** Real-time popups ("Kavya from JNTU just registered") boosting FOMO.
- **1-Click WhatsApp Referral Engine:** Auto-populates pre-written message + student's unique link.
- **Gamified Reward Bar:** Visual progress tracking unlocking the digital placement kit at 3 invites.

🧪 6. Three Core Growth Tests (Hypothesis → Test → Metric)

Test 1: Headline Value Proposition (Skill vs. Career Outcome)

Hypothesis: Engineering students are motivated more by immediate resume/placement outcomes than abstract AI learning. A hook emphasizing "Add a Working AI Project to Your Resume Tonight" will yield a 35% higher registration conversion than "Learn AI Fundamentals in 60 Minutes".
What to Test: A/B test hero headline across 200 incoming student clicks: Variant A (Skill-focused) vs. Variant B (Placement-outcome focused).
Metric: Visitor-to-registration conversion rate (CVR %).

Test 2: Referral Incentive Structure (Certificate vs. Placement Kit)

Hypothesis: Students are significantly more motivated to share if the unlockable incentive offers tangible placement utility rather than generic participation badges.
What to Test: Test two post-registration referral offers: Variant A ("Refer 3 friends for an Advanced AI Certificate") vs. Variant B ("Refer 3 friends to unlock Top 50 AI Interview Questions & Resume Template").
Metric: Referral Viral K-Factor (% of registrants who click WhatsApp share and generate ≥1 secondary signup).

Test 3: Live Show-Up Optimization (WhatsApp Ping vs. Email Calendar)

Hypothesis: Free webinars typically suffer 20-30% show-up rates. A direct WhatsApp 15-minute ping with a 1-click Google Colab link will push live attendance to 50%+.
What to Test: Group A receives standard email calendar notification; Group B receives WhatsApp ping with "Zero setup needed — Click to join live workshop".
Metric: Live attendance show-up rate (% of registered students attending ≥30 minutes).

🤖 7. Deliberate AI Rejections & Human Strategic Judgment

What AI Suggested That I Deliberately Rejected & Why:

Area	AI Default Suggestion	Why I Rejected It & Strategic Decision
Budget Allocation	Split ₹2,000 evenly across Google Ads, Facebook Ads & Twitter.	**Rejected:** ₹2,000 spread across 3 paid channels yields negligible reach (~40 clicks, ~15 signups). Shifted 100% to organic WhatsApp virality + campus ambassadors.
Referral Reward	Offer ₹50 cash / Amazon voucher per friend referred.	**Rejected:** Would exhaust our ₹2,000 budget in 40 signups and attract dummy registrations. Replaced with high-utility, ₹0-cost digital placement toolkits.
Design Theme	Standard bright/white background with generic smiling classroom photos.	**Rejected:** Looks like a spam ad. Built a sleek dark-mode, tech-forward interface that feels authentic to developers and elevates NxtWave brand trust.
